

Mechanic In A Bottle™

FUEL SYSTEM FIX-ALL

FIX Poor or Non-Running Engines

- Synthetic fuel additive works in your power equipment with 2 & 4-cycle engines. It removes all varnish in the fuel system without having to remove the carburetor, removes carbon deposits and water, revitalizes rubber and plastic components, replaces lost Octane, and rejuvenates old fuel. Cleanses your equipment's fuel system so that it starts efficiently and operates in top condition.
- On Machine Carburetor Cleaning: Works to clean varnish in the fuel system without having to remove the carburetor.
- Reconditions Rubber & Plastic Parts: Dual lubricants condition rubber and plastic components and rejuvenates rubber gaskets and seals that may have dried out from ethanol.
- Revitalizes Stale Fuel: Restores old, decayed fuel by breaking down carbon deposits.
- Safely Dissolves Varnish/Shellac: Safely cleanses internal engine components.
- Carbon Cleaner: Cleanse power-robbing carbon deposits from engine's internal components.
- Removes Water: Removes water that causes corrosion and poor running.
- Fuel Stabilization: Keeps engine in top working condition, avoiding repairs and downtime.
- Octane Booster: Added to replace lost octane.
- **Not A Replacement For 2-Cycle Oil**
