

REDUCES REGEN BURN CYCLE TIME

REDUCES DIESEL FUEL & DEF CONSUMPTION

DIESEL FUEL TREATMENT

TREATS **360** GALLONS

This ultra-concentrated synthetic diesel additive allows the fuel to burn clean & efficiently, thus reducing the soot & particulate. With less soot & particulate, the DPF (Diesel Particulate Filter) does not plug as fast, requiring fewer regen burn cycles to burn off the soot. Since regen burn cycles require the use of diesel fuel and DEF, using Diesel Mechanic In A Bottle DEF Reducer helps reduce diesel fuel and DEF consumption.

- Reduces Regenerative Burn Cycles
- Greatly Reduces DEF Usage
- Extends Particulate Filter Life
- Reduces Injector Stiction
- Reduces Labor and Downtime Costs
- Reduces Costly DPF Replacement
- Effective in all diesel fuels including ULSD and biodiesel blends
- Ultra Low Sulfur Diesel (ULSD) Compliant
- Ultra-Concentrated Formula
